

AI testing inside your development workflow

An AI test harness with specialist sub-agents for your coding agent

 Built by Testers.ai

CARBON adds a testing harness to your agent

Your coding agent

Model, source context,
browser and development
tools

The CARBON harness

Risk-based workflows,
specialist perspectives and
saved evidence

Your product team

Customer intent, priorities,
acceptable risk and release
ownership

CARBON works inside compatible coding agents such as Claude Code, Codex and Cursor.

Testing context for every role

Developers

Work from reproducible findings and verify focused fixes.

Business analysts

Turn business intent and exceptions into testable expectations.

Delivery / PC

Coordinate findings, owners and the evidence still needed.

Testers / QA

Broaden exploration and challenge weak test checks.

Architecture / SA

Prioritize cross-service risks and failure recovery.

CTO / leadership

Set boundaries and evaluate the value of AI-assisted QA.

/carbon starts the testing loop

01

Understand

Intent, code and existing tests

02

Prioritize

Risk and important journeys

03

Exercise

Checks and exploratory behavior

04

Explain

Evidence, findings and gaps

05

Continue

Retest or investigate the next risk

A visible plan and report keep the investigation understandable.

AI sub-agents examine different risks

code**

CARBON coordinates specialist perspectives. Your team steers the priorities.

A shared map of testing coverage

The screenshot displays the Carbon testing tool interface. On the left, a sidebar lists various page captures: 'Brewtown Coffee — Home', 'Menu - No matching drinks', 'Brewtown Coffee — Contact', 'Brewtown Coffee — About', 'Brewtown Coffee — Menu', 'Menu - All items restored', and 'Menu - Tea selected'. The main area shows the 'Brewtown Coffee — Home' page with a 'Expand page' button. Below this, a 'User journeys - 1' section shows a flow from 'Home' to 'menu' to 'contact'. The 'Elements on this page - 2' section lists 'Click See the menu' and 'Return home; click Contact'. On the right, the 'SELECTED PAGE' section for 'Brewtown Coffee — Home' includes 'What we know' (Reach Brewtown Coffee — Home, passed), 'What to test next' (Up to three checks, using your current priority settings), and a list of actions: 'Inspect Click See the menu and define missing checks', 'Inspect Return home; click Contact and define missing checks', 'Risk assessment & technical details', 'Changes & history', and 'All checks for this item'. A 'Tell Carbon what matters here' button is also present.

What was seen?

Pages, states and evidence

What comes next?

Untried checks and important risks

Existing demo capture. Available controls depend on your installation.

Try CARBON on a disposable project

/carbon-demo

Create a disposable project and start a first run.

/carbon-issues

Investigate one multi-step flow in that demo.

/carbon-map

Show what was explored and what needs attention.

Start with a demo, investigate a journey, then explore the evidence.

CARBON commands

/carbon

Run a bounded, broad assessment.

/carbon-auto

Run a bounded test, fix and retest loop.

/carbon-accessibility

Investigate accessibility barriers.

/carbon-privacy

Check how personal data is handled.

/carbon-security

Investigate security weaknesses.

/carbon-issues

Hunt reproducible bugs and state failures.

/carbon-map

Visualize the current assessment.

/carbon-confidence

Assess readiness from scoped evidence.

A repeatable routine for each change

Scope the change

Give CARBON the relevant code, intent and existing tests.

Investigate the risk

Exercise important journeys, state changes and failure recovery.

Review the evidence

Reproduce findings, inspect the gaps and verify authorized repairs.

Keep what you learn

Save useful checks and context for the next investigation.

Iceberg QA testing support and team training

Experienced human QA specialists, amplified by AI.

More coverage, sooner

Our AI QA experts investigate important journeys and edge cases with CARBON and complementary tools. Your team gets actionable findings and evidence.

Skills your team can keep

Build your team's skills through guided setup, live testing sessions and practical coaching. Learn to use tools like CARBON in your own workflow.

Use CARBON yourself, or bring in expert help

icebergqa.com

Where could CARBON help your team first?

Which journey needs more testing?

What would you like CARBON to investigate?

Would expert support help you get started?

Install CARBON. For expert support, contact Iceberg QA below.
