

AI Test Results from testers.ai

The Khosla app's HOME page reveals significant quality concerns. Numerous 404 errors indicate missing resources, impacting performance and user experience. Accessibility is a major issue, with missing alt text for images and focus indicators on interactive elements. Security vulnerabilities are present due to an outdated jQuery Migrate library and missing privacy policy consent for Google Tag Manager usage. These problems collectively detract from the app's overall quality and require immediate attention.

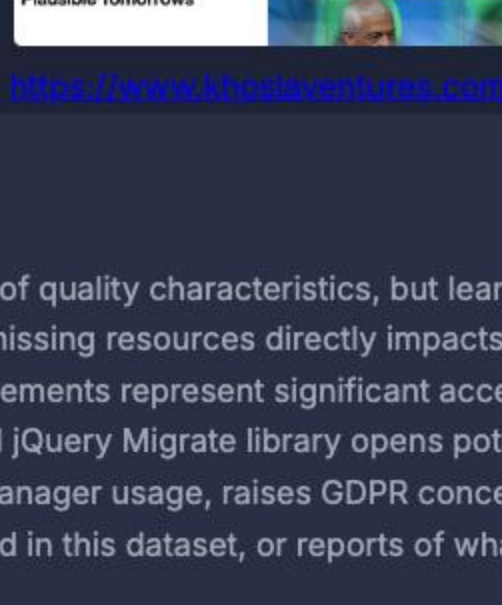

Best Aspects

There's not much to praise here. At least the bugs are documented? Maybe the app has potential if these issues are addressed.

Areas for Improvement

The app's HOME page is plagued by accessibility violations, security risks, and content errors. The combination of missing alt text, outdated libraries, and 404 errors creates a poor and potentially harmful user experience.

Quality Summary

<https://www.testers.ai/>

Detailed Analysis

The Khosla app's HOME page presents a mixed bag of quality characteristics, but leans heavily towards needing improvement. On the negative side, a multitude of 404 errors pointing to missing resources directly impacts performance and frustrates users. The lack of alt text for images and missing focus styles for interactive elements represent significant accessibility failings, rendering the app difficult to use for people with disabilities. The presence of an outdated jQuery Migrate library opens potential security vulnerabilities. The fact that there is no explicit consent and privacy policy for Google Tag Manager usage, raises GDPR concerns. A 'Missing Page Title', is a serious miss for SEO. On the other hand, there is no positive signal reported in this dataset, or reports of what is done well.

Key Suggestions

- Conduct a thorough security audit to identify and address all vulnerabilities.
- Implement a comprehensive accessibility testing strategy to ensure compliance with WCAG guidelines.
- Establish a robust content management process to prevent broken links and missing resources.
- Prioritize and address accessibility compliance and UX/UI design, to ensure all users can fully use the product
- Ensure you have valid cookie management, GDPR compliance, and other applicable regulations are managed

Priority Improvements

1. Replace the outdated jQuery Migrate library with an updated version or remove it entirely if not needed.
2. Implement explicit consent mechanisms and a clear privacy policy for Google Tag Manager usage to ensure GDPR compliance.
3. Fix all 404 errors by restoring the missing resources or removing broken links.
4. Add alt text to all images to improve accessibility.
5. Implement focus indicators on all interactive elements to improve keyboard navigation and usability.
6. Add a title tag.

Missing Focus Indicator on 'Open Search' Link

Priority: 7/10 Confidence: 8/10

WCAG Keyboard Navigation

Focus Indicators

Why is this a bug?
The 'Open Search' link (tag_name: 'a', class: 'open-search') lacks a visible focus indicator when navigated to using the keyboard. This makes it difficult for keyboard users to identify which element has focus, violating WCAG 2.4.7 Focus Visible.

Suggested Fix
Implement a clear and visible focus indicator (e.g., a border or highlight) for the 'Open Search' link when it receives keyboard focus.

Why Fix This?
Ensures that users navigating with a keyboard can easily identify the currently focused element, improving usability and accessibility.

Missing Page Title

Priority: 7/10 Confidence: 8/10

general SEO WCAG

Why is this a bug?
A page title is crucial for SEO and accessibility. It helps users understand the context of the page and is a key element for search engine indexing. The current page lacks a descriptive title, which can negatively impact its visibility and user experience.

Suggested Fix
Add a descriptive and relevant page title within the <head> section of the HTML. The title should accurately reflect the content and purpose of the page.

Why Fix This?
Improves SEO, accessibility, and overall user experience.

Multiple 404 Errors - Missing Resources

Priority: 7/10 Confidence: 8/10

content performance

Why is this a bug?
The console logs indicate multiple 404 errors, meaning that the client is requesting resources (likely images, scripts, or stylesheets) that the server cannot find. This directly impacts the user experience as content will be missing or functionality broken.

Suggested Fix
Investigate the missing resources and either restore them to the server or update the application to no longer request them. Check for typos in resource paths within the application code. If the resources are intentionally no longer used, remove references to them in the HTML, CSS, and JavaScript.

Why Fix This?
Fixing the 404 errors will improve the user experience by ensuring all necessary resources are loaded. It also reduces unnecessary network requests and potential performance bottlenecks.

Outdated Copyright Notice

Priority: 8/10 Confidence: 9/10

General

Why is this a bug?
The copyright notice at the bottom of the page only states 'Vinod Khosla'. It should include the current year, 2025, to be valid and up-to-date. The absence of the year makes it outdated and potentially legally problematic.

Suggested Fix
Update the copyright notice to include the current year. For example, 'Copyright 2025 Vinod Khosla.'

Why Fix This?
Ensuring the copyright notice is current protects the company's intellectual property and avoids potential legal issues related to copyright claims.

Lack of explicit consent and privacy policy for Google Tag Manager usage

Priority: 7/10 Confidence: 8/10

GDPR Data Collection Transparency

User Consent Management

Why is this a bug?
The website includes Google Tag Manager (gtag.js) which is used for tracking and analytics. However, there is no obvious or easily found privacy policy or consent mechanism that clearly explains to users what data is being collected, how it is being used, and how users can control or withdraw their consent. This violates GDPR requirements for transparency and user consent. The inclusion of gtag.js is confirmed by the network calls.

Suggested Fix
Implement a clear and concise privacy policy that is easily accessible from the homepage. Implement a consent management platform (CMP) to obtain user consent before loading gtag.js and other tracking scripts. Ensure the CMP allows users to easily withdraw their consent.

Why Fix This?
Failure to comply with GDPR can result in significant fines and reputational damage.

Missing Focus Indicator on 'Open Menu' Link

Priority: 7/10 Confidence: 8/10

WCAG Keyboard Navigation

Focus Indicators

Why is this a bug?
The 'Open Menu' link (tag_name: 'a', class: 'open-link') lacks a visible focus indicator when navigated to using the keyboard. This makes it difficult for keyboard users to identify which element has focus, violating WCAG 2.4.7 Focus Visible.

Suggested Fix
Implement a clear and visible focus indicator (e.g., a border or highlight) for the 'Open Menu' link when it receives keyboard focus.

Why Fix This?
Ensures that users navigating with a keyboard can easily identify the currently focused element, improving usability and accessibility.

Missing Focus Indicator on 'Close Search' Link

Priority: 7/10 Confidence: 8/10

WCAG Keyboard Navigation

Focus Indicators

Why is this a bug?
The 'Close Search' link (tag_name: 'a', class: 'close-search') lacks a visible focus indicator when navigated to using the keyboard. This makes it difficult for keyboard users to identify which element has focus, violating WCAG 2.4.7 Focus Visible.

Suggested Fix
Implement a clear and visible focus indicator (e.g., a border or highlight) for the 'Close Search' link when it receives keyboard focus.

Why Fix This?
Ensures that users navigating with a keyboard can easily identify the currently focused element, improving usability and accessibility.

Missing Focus Styles on Interactive Elements

Priority: 7/10 Confidence: 8/10

WCAG Usability

Why is this a bug?
When navigating a website using a keyboard, it's essential to have clear visual focus indicators on interactive elements such as links. This helps users understand which element is currently selected and allows them to navigate efficiently. The current website may lack or have insufficient focus styles, hindering keyboard navigation.

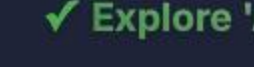

Suggested Fix
Implement clear and distinct focus styles for all interactive elements (links, buttons, form fields). The focus style should be visually prominent and easily distinguishable from the default state.

Why Fix This?
Improves accessibility for keyboard users and enhances overall usability.

AI Generated Functional Test Results

Start Page: HOME

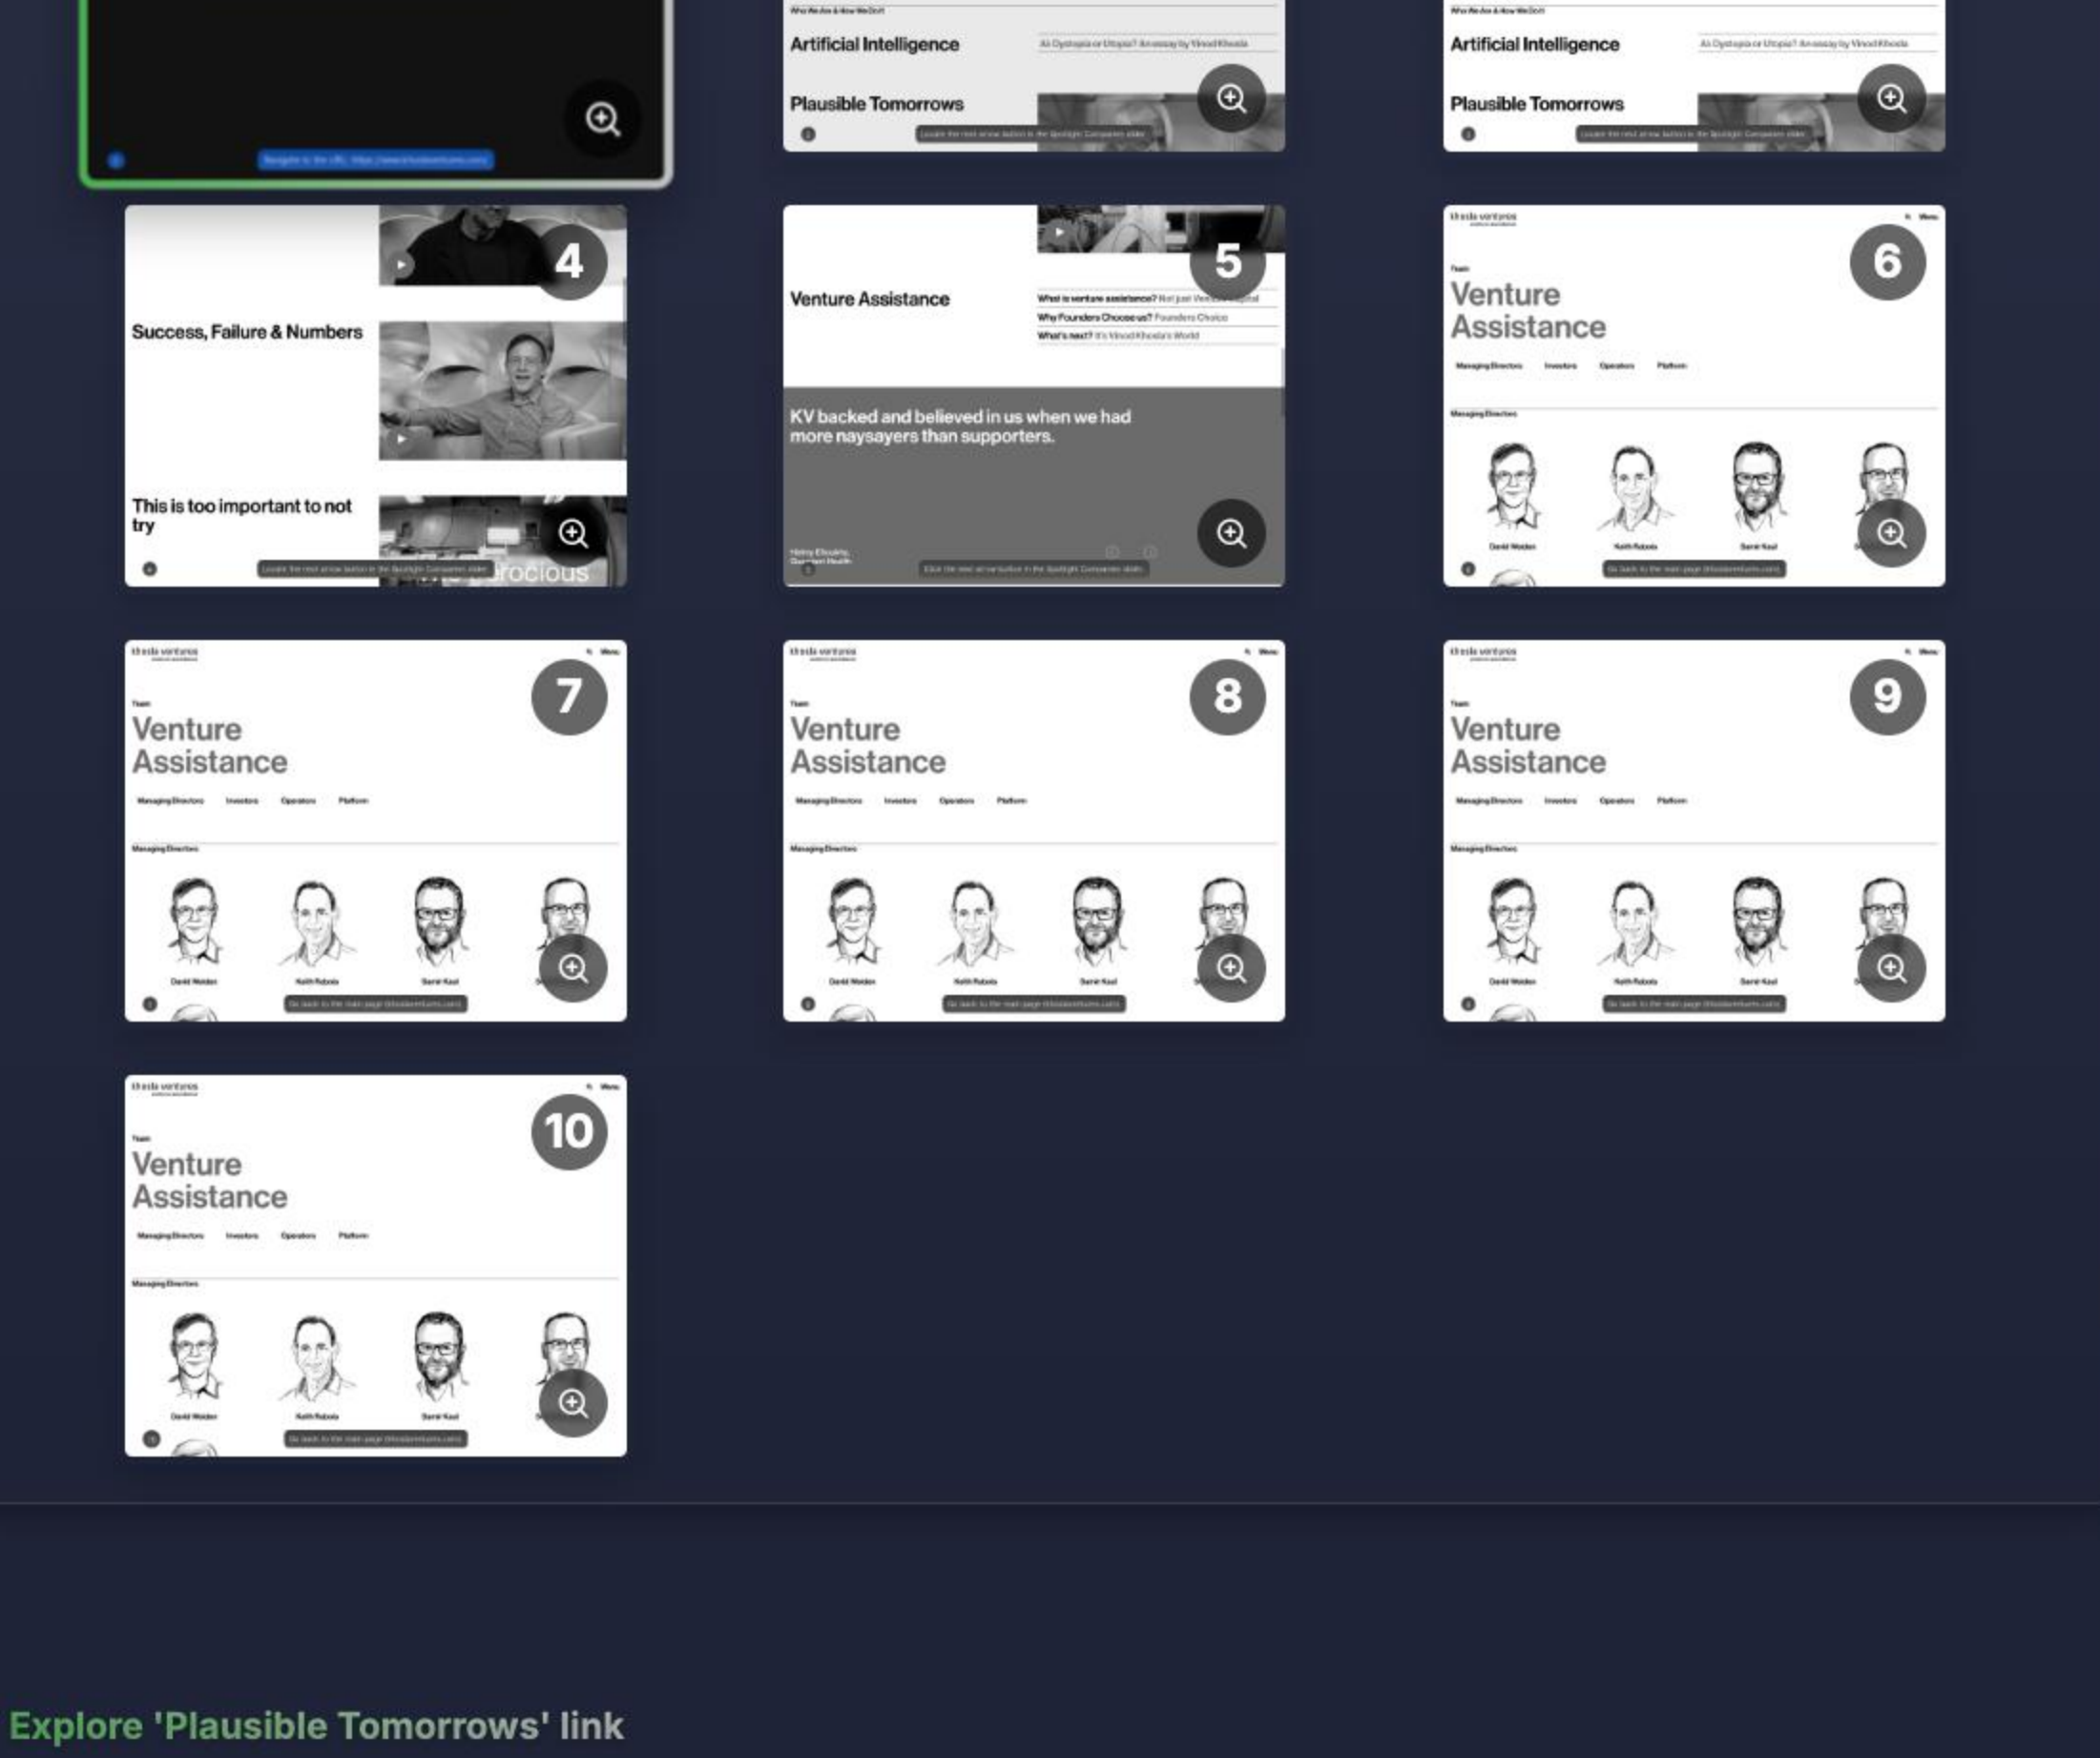

Explore 'Artificial Intelligence' link

This test verifies that clicking the 'Artificial Intelligence' link navigates the user to the intended section or page, allowing exploration of content related to Artificial Intelligence.

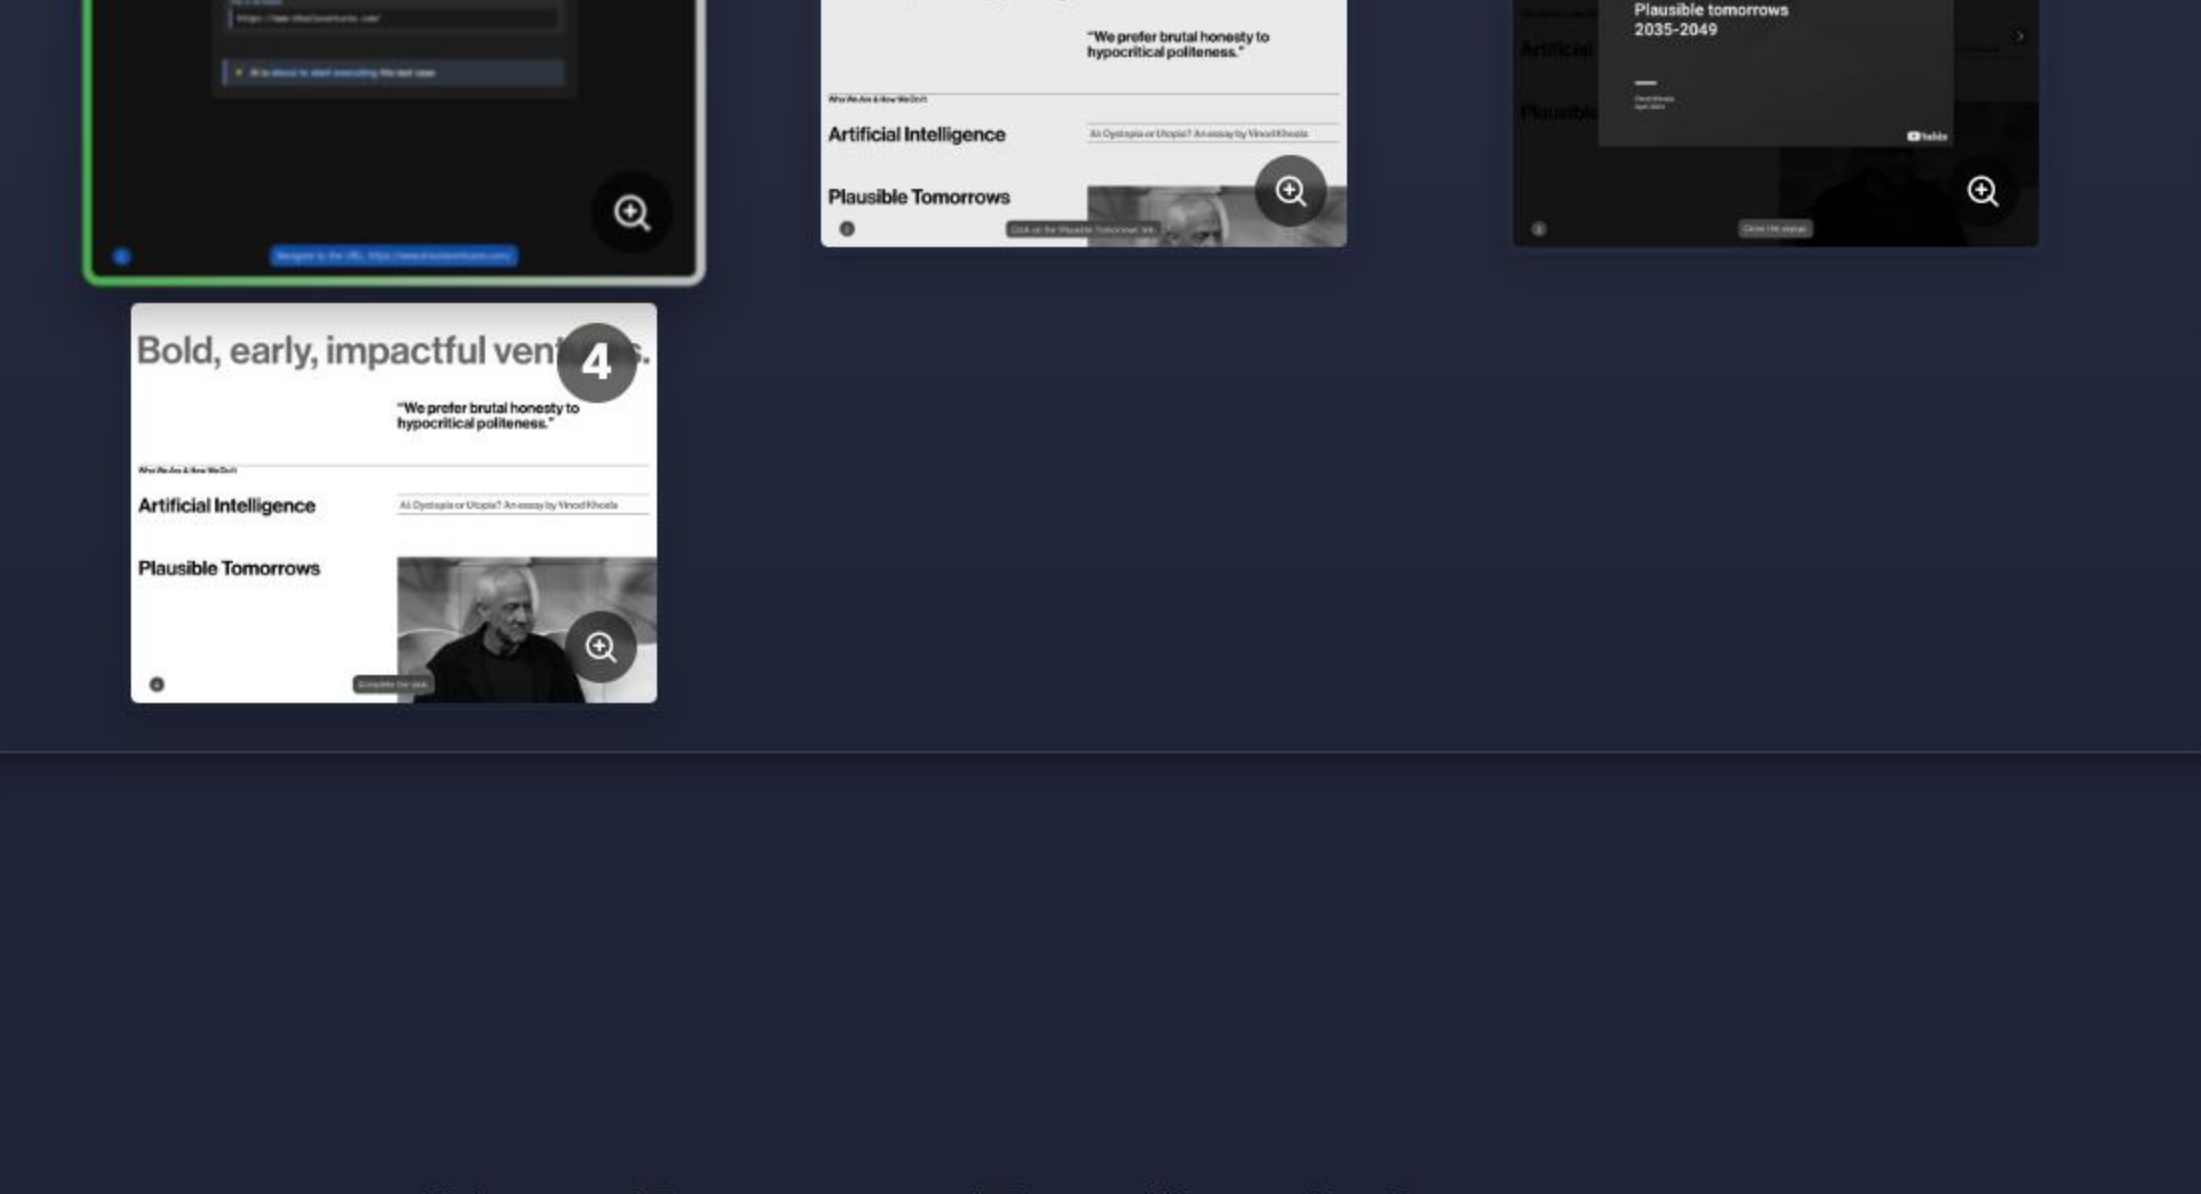

Click Next Arrow on Spotlight Companies Slider

This test verifies that the next arrow on the Spotlight Companies slider advances the slider to show the next set of companies. This ensures users can scroll through the companies.

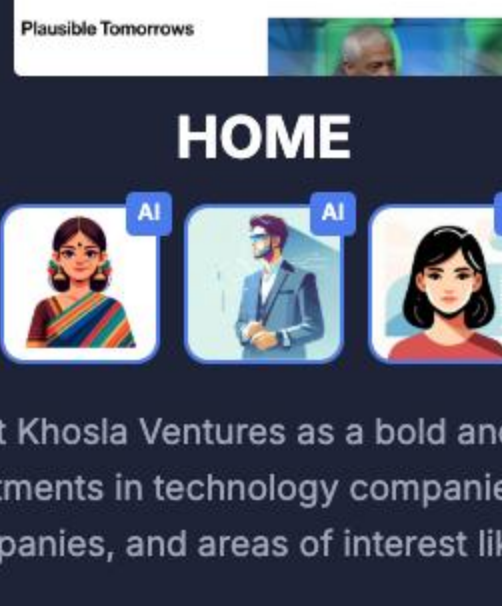

Explore 'Plausible Tomorrows' link

This test verifies that clicking the 'Plausible Tomorrows' link navigates the user to the intended section or page, allowing exploration of content related to plausible tomorrows ventures.

User Persona Feedback Summary

HOME

The webpage aims to present Khosla Ventures as a bold and impactful venture capital firm focused on early-stage investments in technology companies. It highlights their investment philosophy, portfolio companies, and areas of interest like AI and clean technology.

Overall Score	Visual Design	Usability	Content Quality
★★★★★	★★★★★	★★★★★	★★★★★
The website is well-designed and informative, providing a clear picture of Khosla Ventures' investment approach and portfolio. However, it could benefit from more detailed information on the team and specific investment criteria. It clearly conveys a sense of innovation and a willingness to take risks on groundbreaking ideas.	I like the clean layout and the bold colors. The images of the founders are a nice touch, making the firm seem more personable. It feels modern and innovative which makes me want to know more.	The website is easy to navigate. All the links work and are well laid out. The user can find information quickly and easily.	The content is informative and well detailed, but it could be more engaging. It provides a good overview of Khosla Ventures' investment philosophy and portfolio companies, but it lacks specifics on their investment criteria and team expertise. The quotes from founders add credibility and make the firm more approachable.

Individual User Persona Feedback

Aisha Khan, 28

Persona:Aisha is a startup founder working on a new AI-powered healthcare solution. She has a technical background and is looking for venture capital firms that understand deep tech and are willing to take risks on early-stage companies. She has previously received funding from angel investors, and is ready to move to the seed round.

Overall Rating

★★★★★

As a startup founder, I'm looking for VCs who 'get' deep tech. This site shows they invest in interesting areas like AI and healthcare, which is great. But I need more details - what's their investment process? Who on their team specializes in healthcare AI? More specifics would help me decide if they're a good fit.

Actions Performed

- Reviewed the portfolio companies
- Reading about venture assistance

Suggestions

- Add detailed team bios and expertise.
- Clearly outline investment criteria and process.
- Include a portfolio company search feature.

David Lee, 45

Persona:David is a technology analyst who follows the venture capital industry. He is interested in understanding the investment strategies and portfolio companies of leading VC firms. He writes a blog about technology trends and venture capital.

Overall Rating

★★★★★

As a tech analyst, I appreciate the clear articulation of Khosla Ventures' investment philosophy. The portfolio is impressive, and the content like the AI essay is thought-provoking. For my research, I wish there was more data on investment sizes and sectors. Overall, it's a solid representation of their brand.

Actions Performed

- Reviewing the portfolio companies
- Reading the AI essay by Vinod Khosla

Suggestions

- Add more data on investment sizes and sectors.
- Provide more detailed information on portfolio company performance.

Sarah Chen, 32

Persona:Sarah is a Senior Associate at a Private Equity firm. Previously she was a successful manager at a Fortune 500 business for 5 years. She is considering a career move into Venture Capital. She is looking to understand what Khosla Ventures is looking for.

Overall Rating

★★★★★

The website does a decent job of showcasing Khosla Ventures, but as someone considering a career move to VC, I want to see more details on the team - what are their backgrounds, how did they come to be at the firm? I like the founders' choice, but it also reads a bit cliché - I want to hear about specifics and why those founders said that.

Actions Performed

- Looking at the team

Suggestions

- What is venture assistance?
- Why Founders Choose us? Founders Choice
- Add more about team background.
- Explain more about what makes the firm different.
- Add Career opportunities
