

# AI Test Results from testers.ai

**B-**

The Playtika app's HOME page exhibits a variety of quality issues. From a technical perspective, there are concerns regarding content security policy misconfigurations potentially stemming from MIME type errors in stylesheets. Functionally, the iframe message failures could disrupt user experience. Accessibility issues, such as missing focus states and insufficient alt text, indicate areas for improvement. Usability is also impacted by redundant 'Play now' links. Addressing these issues would improve the page's overall quality.

### Best Aspects

The app clearly has content that is engaging enough that people are willing to use it despite the bugs, and there's likely a solid framework in place, but it needs some quality love.

### Areas for Improvement

The combination of potential security vulnerabilities, accessibility issues, and usability problems on the HOME page suggests a lack of comprehensive quality assurance processes.

## Quality Summary

HOME

0.42 seconds

<https://www.playtika.com/>

### Detailed Analysis

The Playtika app's HOME page, while likely presenting engaging content, suffers from a range of quality issues spanning technical, accessibility, and usability domains. On the technical front, the MIME type error for stylesheets is not just a minor annoyance; it potentially opens the door to content security policy misconfigurations, a serious security concern. Furthermore, the iframe message failure points to potential communication problems within the application architecture, potentially breaking key functionality. The presence of an unused/duplicate SCSS file indicates a lack of attention to performance and maintainability. From an accessibility standpoint, the HOME page falls short, with missing clear visual focus states on interactive elements, insufficient alt text for game images, and custom accessibility shortcuts that may interfere with standard keyboard navigation. Finally, from a usability perspective, the redundant 'Play now' links for each game clutter the interface, potentially confusing users and degrading the overall user experience. All of these shortcomings, taken together, paint a picture of a page that could benefit greatly from targeted quality improvement efforts.

### Key Suggestions

- Implement automated accessibility testing to catch issues like missing focus states and insufficient alt text early in the development cycle.
- Conduct a security audit to identify and remediate potential vulnerabilities, especially related to content security policy and third-party resource loading.
- Perform a usability review of the HOME page to identify and address UI clutter and navigation inefficiencies.
- Establish clear guidelines for alt text and focus states as part of the development process.
- Enforce secure coding practices during stylesheet development to prevent MIME type misconfigurations.

### Priority Improvements

1. Correct the MIME type configuration for stylesheets to prevent potential content security policy misconfigurations.
2. Implement clear visual focus states on all interactive elements to improve keyboard navigation accessibility.
3. Ensure all game images have sufficient and descriptive alt text.
4. Remove redundant 'Play now' links to reduce UI clutter and improve usability.
5. Investigate and resolve the Iframe Message Failure to ensure proper communication between application components.

## Issues Found by AI Testers

### Missing Top Navigation Bar

Priority: 8/10 Confidence: 9/10

general navigation

#### Why is this a bug?

The top navigation bar present in the large browser view (containing links like 'Get to know us', 'Games', 'Life at Playtika', etc.) is completely absent in the mobile view. This makes it difficult or impossible for users to access other parts of the website.

#### Suggested Fix

Implement a responsive navigation solution, such as a hamburger menu, to ensure the top navigation is accessible on smaller screens. Ensure a hamburger menu is visible at the top of the page immediately.

#### Why Fix This?

Without a navigation bar, users cannot easily navigate the website, leading to a poor user experience and potentially lost engagement.

### Missing Clear Visual Focus States on Interactive Elements

Priority: 8/10 Confidence: 9/10

WCAG Accessibility Keyboard Navigation

#### Why is this a bug?

Interactive elements like the 'Play Now' buttons and navigation links don't visibly highlight when focused via keyboard navigation. This makes it difficult for users who rely on keyboard navigation to understand which element is currently active, severely hindering their ability to interact with the page.

#### Suggested Fix

Implement a clear and distinguishable visual focus state for all interactive elements, such as a solid border, change in background color, or other visual cue that clearly indicates the focused element. The focus state must meet WCAG 2.0 AA color contrast requirements.

#### Why Fix This?

Lack of visible focus states severely impacts keyboard users and those with visual impairments, making it difficult or impossible to navigate the site effectively. This violates WCAG 2.0 success criteria 2.4.7 Focus Visible.

### MIME Type Error for Stylesheet

Priority: 7/10 Confidence: 8/10

content performance styling

#### Why is this a bug?

The server is serving the stylesheet with an incorrect MIME type ('application/octet-stream'), which prevents the browser from applying the styles. This will result in a broken or unstyled webpage.

#### Suggested Fix

Correct the MIME type configuration on the server serving the stylesheet to 'text/css'.

#### Why Fix This?

Ensuring the stylesheet is properly applied is crucial for the visual presentation and user experience of the website.

## AI Generated Functional Test Results

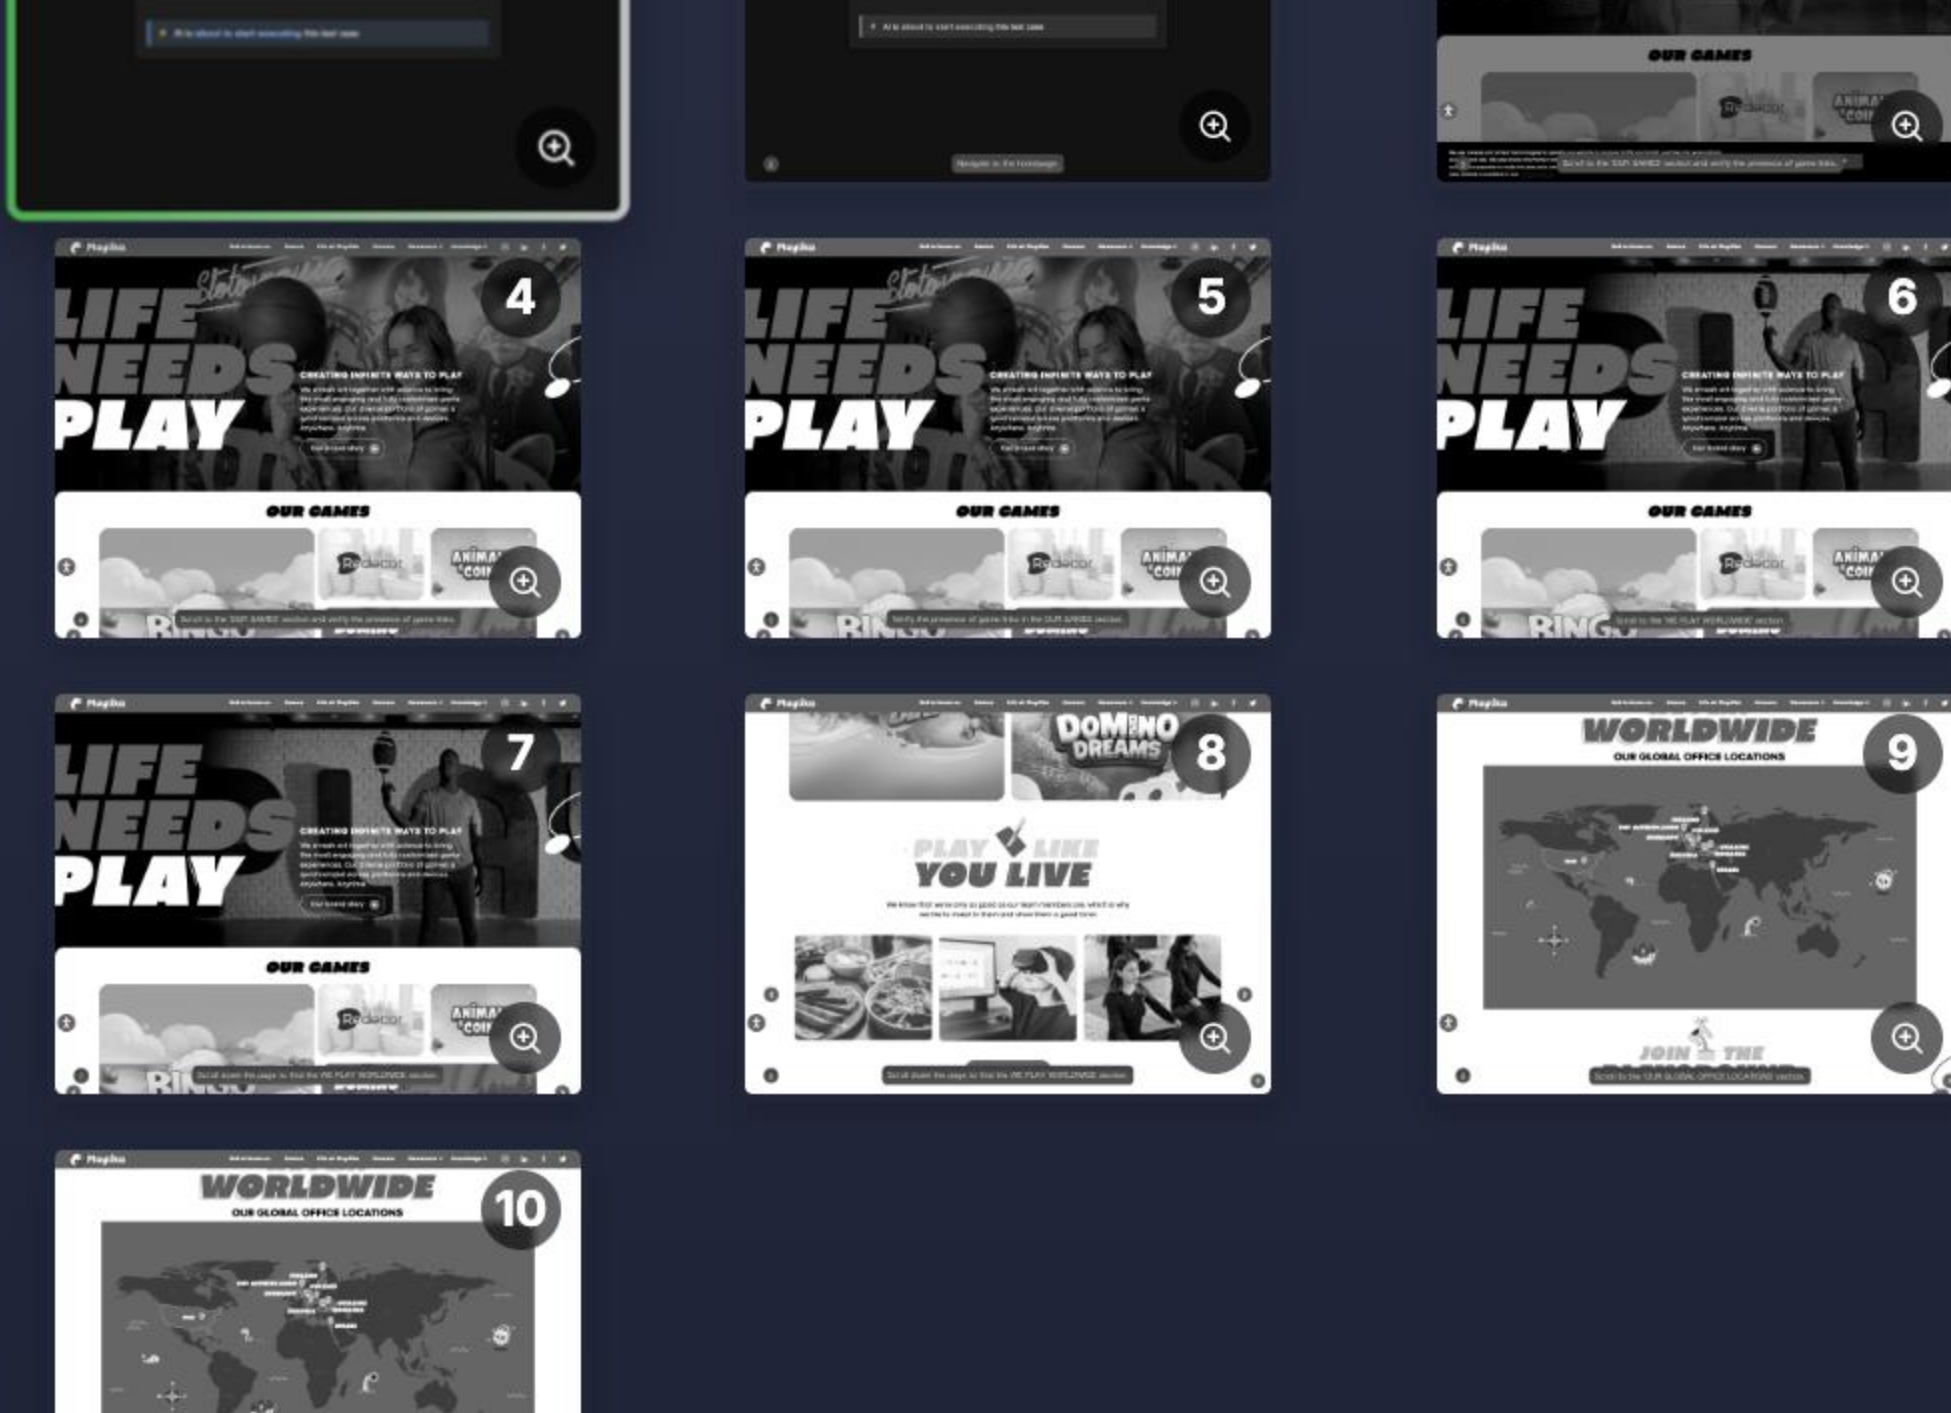

Start Page: HOME

**Aiden**  
Demo\_Tests

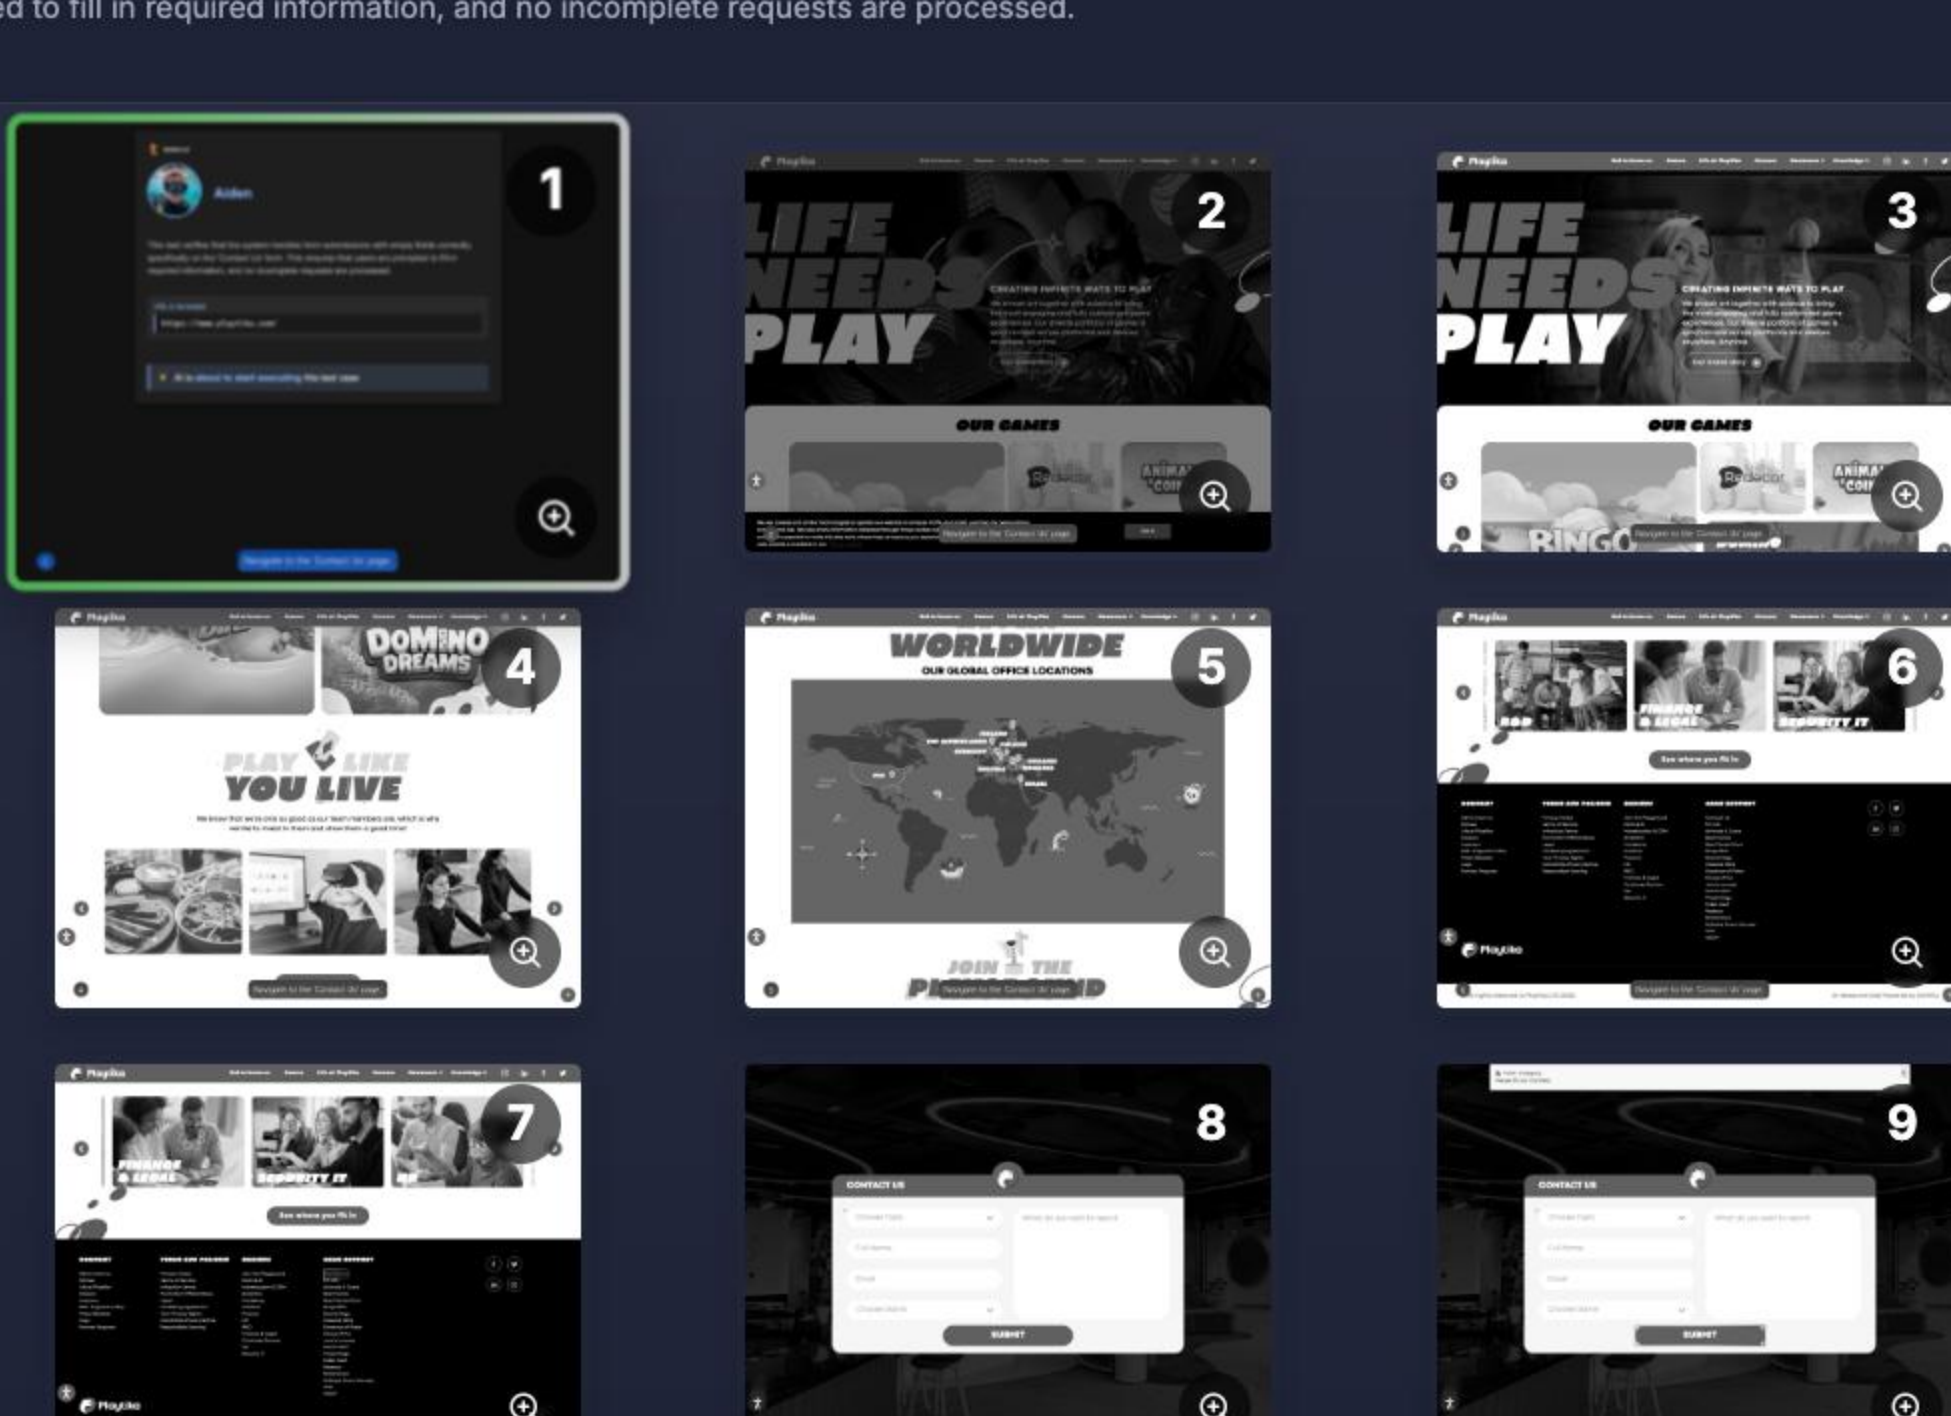

### Navigate through Games and Office Locations

This test verifies the user can navigate through the games section, then through the office locations section of the page. The purpose is to ensure that all the interactive links are functioning and that the user can explore the content sequentially. It is important to ensure users can navigate to all available content. The expected results are a correct page navigation through games and offices.

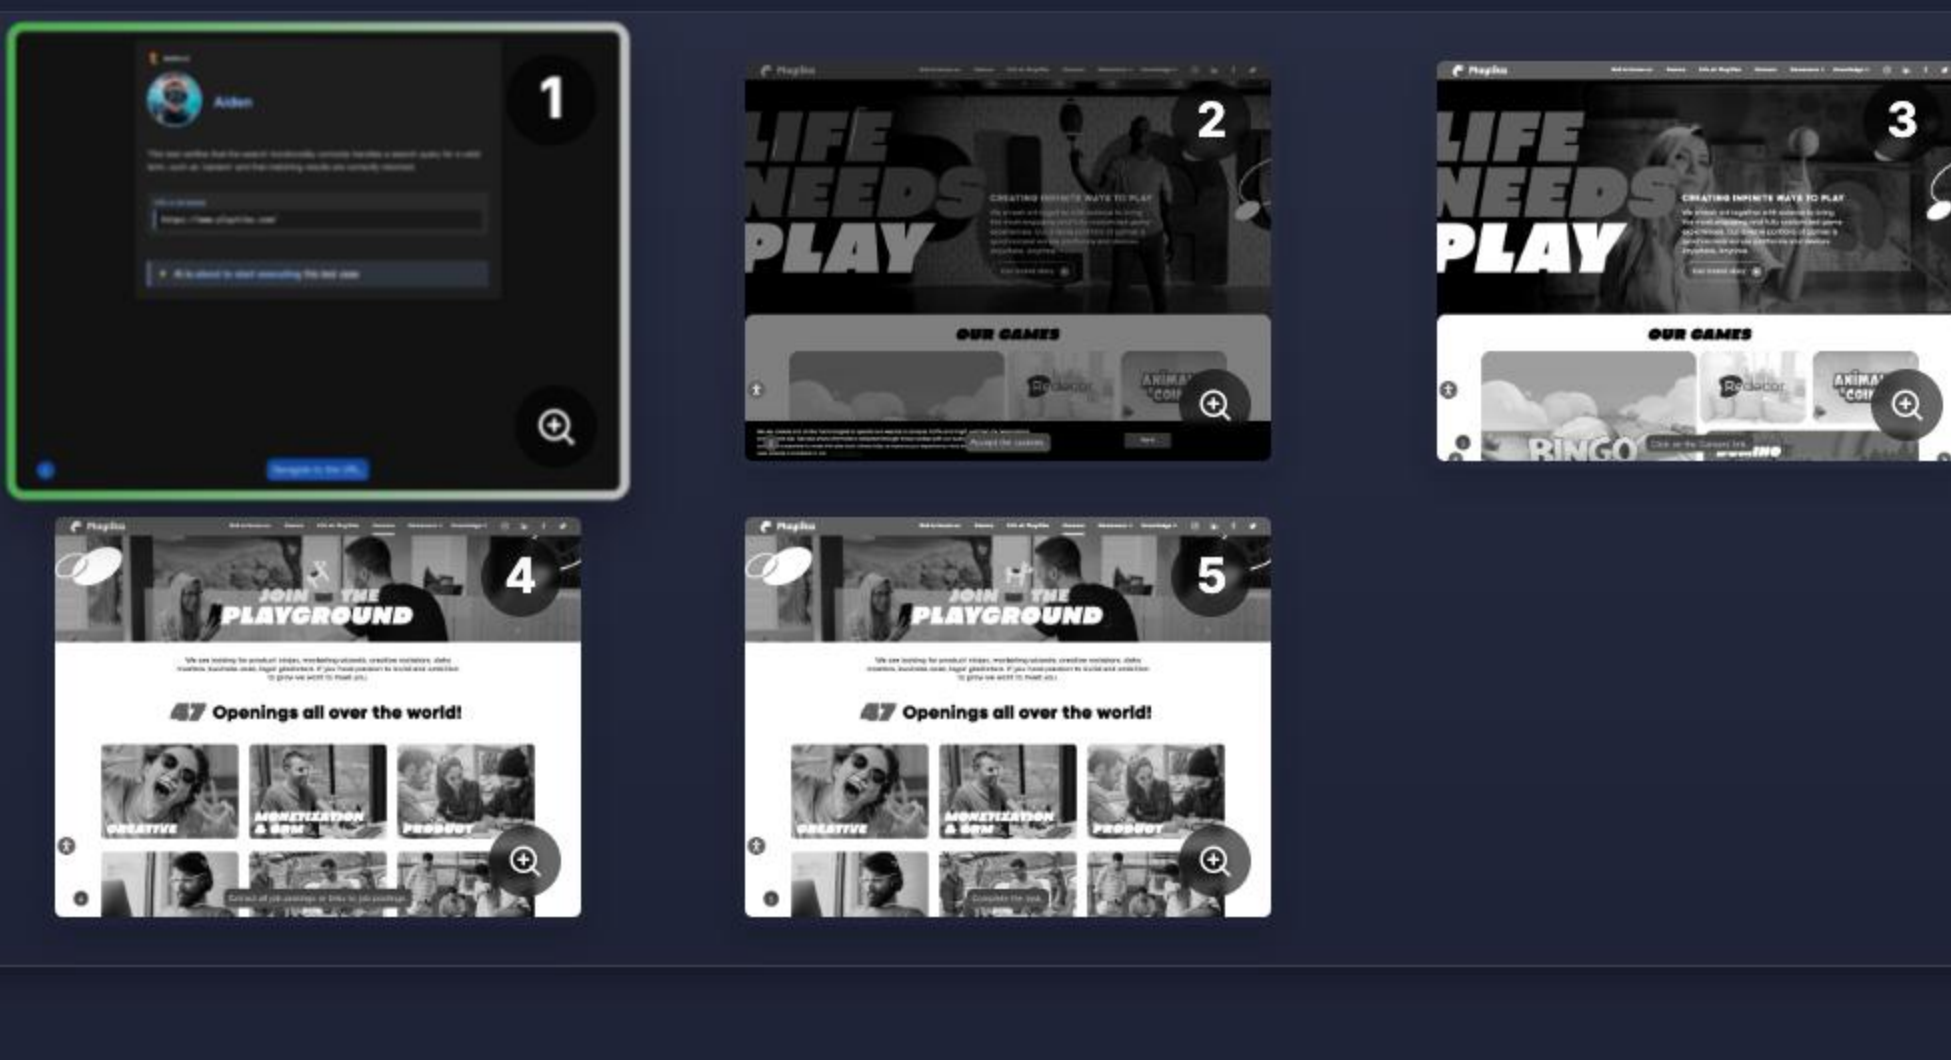

### ✓ Contact Us Submission with Empty Form

This test verifies that the system handles form submissions with empty fields correctly, specifically on the 'Contact Us' form. This ensures that users are prompted to fill in required information, and no incomplete requests are processed.

### ✓ Search for 'Careers'

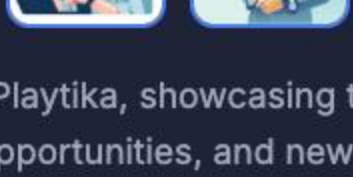

This test verifies that the search functionality correctly handles a search query for a valid term, such as 'careers' and that matching results are correctly returned.

## User Persona Feedback Summary

HOME

The website is a corporate page for Playtika, showcasing their games, company culture, career opportunities, and news.

### Overall Score

★★★★☆

The website is visually appealing and provides a good overview of Playtika as a company and its game portfolio. However, some users might find the navigation slightly overwhelming due to the vast amount of games. Accessibility features are a plus.

### Visual Design

★★★★☆

The visuals are really appealing and make me want to try out the games!

### Usability

★★★★☆

The accessibility features are great. Navigating to specific information like career opportunities or the newsroom is easy, but browsing through all the games could be improved.

### Content Quality

★★★★☆

The content is informative and gives a good overview of Playtika's values and offerings. More detailed information about each game could be useful.

### Individual User Persona Feedback

**Alice Johnson, 28**

Persona: Alice is a software engineer working at a tech startup. She enjoys playing puzzle games and social casino games in her free time to unwind. She's always on the lookout for new and engaging games to try.

#### Overall Rating

★★★★☆

*As a developer, I appreciate that the site supports accessibility. It loads fast and is very responsive. I love the colourful design, and the variety of games looks great!*

#### Actions Performed

- Browse the game list
- Click 'Play Now' on a game of interest

#### Suggestions

- Add filters for game genres and platforms
- Include trailers or gameplay videos for each game

**David Lee, 35**

Persona: David is a marketing manager interested in the gaming industry and looking for potential partnerships or insights into successful game marketing strategies. He also enjoys playing poker and strategy games.

#### Overall Rating

★★★★☆

*I appreciate the wide variety of games showcased, and the website provides a good overview of the company. However, I'm struggling to find deeper insights into Playtika's marketing strategies.*

#### Actions Performed

- Explore the 'Games' section
- Visit the 'Newsroom' for industry insights

#### Suggestions

- Create a section on marketing insights or case studies
- Provide more marketing analysis of successful games
