

# AI Test Results from testers.ai

The 'Recur Club' app demonstrates a mix of functional and technical shortcomings on its HOME page. Network connection issues and redundant GSAP library requests negatively impact performance, leading to a frustrating user experience. Accessibility issues, such as missing alternative text for images and insufficient text contrast, hinder usability for users with disabilities. Content issues, like the missing Inc42 announcement card on mobile, further detract from the overall quality.

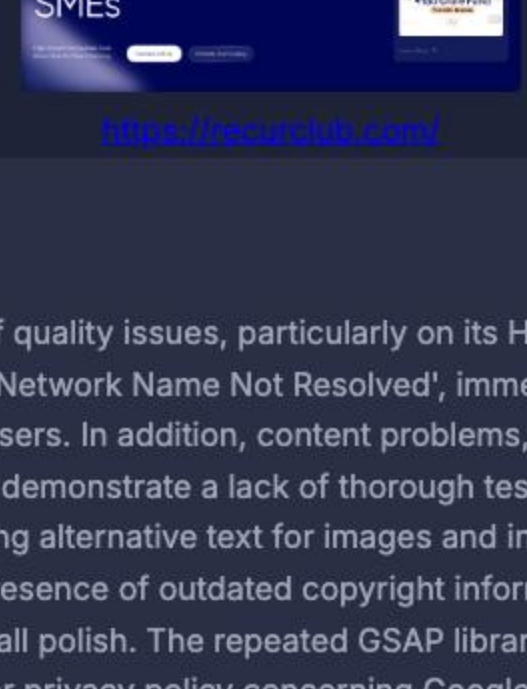

### Best Aspects

The app has the basic structure of a web app, and presumably provides content that is relevant to members of the 'Recur Club'.

### Areas for Improvement

The app's performance is hindered by network errors, while its usability is compromised by accessibility issues and content rendering problems.

## Quality Summary

### Detailed Analysis

The 'Recur Club' app presents a concerning array of quality issues, particularly on its HOME page. The prevalence of network-related errors, such as 'Network Connection Refused' and 'Network Name Not Resolved', immediately raises concerns about the app's stability and performance, creating a poor initial experience for users. In addition, content problems, such as the 'GSAP Target Element(s) Not Found' and 'Inc42 Announcement Card Missing on Mobile', demonstrate a lack of thorough testing and attention to detail. Accessibility considerations are also notably deficient, with missing alternative text for images and insufficient text contrast in the footer section presenting barriers for users with disabilities. The presence of outdated copyright information and broken links further contributes to a perception of neglect and diminishes the app's overall polish. The repeated GSAP library requests also present an opportunity for performance improvement. Finally, the lack of a clear privacy policy concerning Google Tag Manager usage is a significant oversight from a data privacy and transparency standpoint.

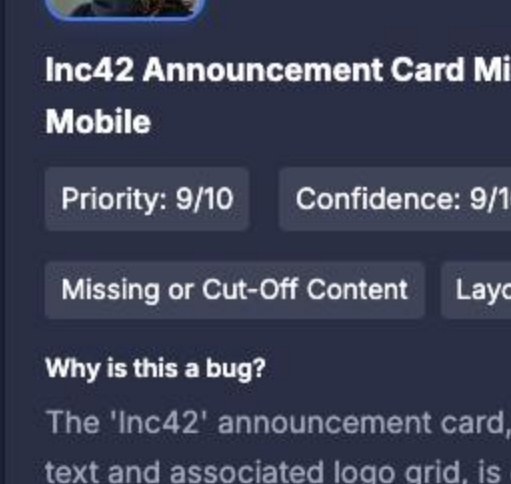

### Key Suggestions

- Prioritize resolving network connection and name resolution errors to improve page load times.
- Implement missing alternative text for all images to meet accessibility standards.
- Increase text contrast in the footer and other areas to improve readability.
- Include a clear privacy policy detailing data collection and third-party tracking practices, especially regarding Google Tag Manager usage.
- Address the GSAP rendering errors and ensure all content displays correctly on all devices and browsers.

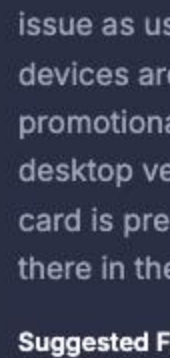

### Priority Improvements

1. Resolve network connection refused and name resolution errors to improve page load times and overall responsiveness.
2. Implement missing alternative text for all images to improve accessibility for visually impaired users.
3. Increase text contrast in the footer section to meet WCAG guidelines and improve readability.
4. Remove redundant GSAP library requests.
5. Add the missing Inc42 announcement card on Mobile
6. Update copyright years to the present to ensure accuracy and maintain a professional appearance.

#### Inc42 Announcement Card Missing on Mobile

Priority: 9/10 Confidence: 9/10

Missing or Cut-Off Content Layout Shifting

**Why is this a bug?**  
The 'Inc42' announcement card, including its text and associated logo grid, is completely absent in the mobile view. This is a critical issue as users accessing the site on mobile devices are missing important information and promotional content that is visible on the desktop version. There is no evidence the card is present but out of view, it is simply not there in the mobile viewport.

**Suggested Fix**  
Implement responsive design principles to ensure the 'Inc42' announcement card is visible and appropriately scaled for mobile devices. Consider placing it below the main heading and buttons in the mobile layout.

**Why Fix This?**  
This bug severely impacts the user experience on mobile devices, preventing users from accessing important announcements and promotional content, and can negatively affect the user journey.

#### Outdated Copyright Year

Priority: 8/10 Confidence: 10/10

general

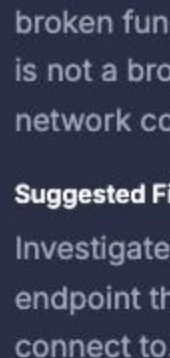

**Why is this a bug?**  
The copyright notice in the footer displays '©2024 Founderlink Technologies Pvt. Ltd. All rights reserved.' The current year is 2025, making the copyright notice outdated. This negatively impacts the website's credibility.

**Suggested Fix**  
Update the copyright notice in the footer to '©2025 Founderlink Technologies Pvt. Ltd. All rights reserved.'

**Why Fix This?**  
Updating the copyright notice ensures the website presents accurate information, enhancing its credibility and demonstrating attention to detail.

#### Network Connection Refused Error

Priority: 7/10 Confidence: 8/10

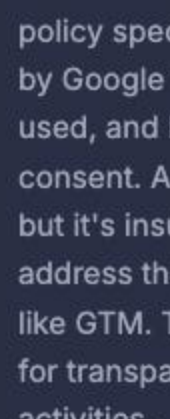

network performance

**Why is this a bug?**  
The 'Failed to load resource: net::ERR\_CONNECTION\_REFUSED' error indicates the webpage is unable to connect to a server or resource. This could lead to broken functionality or missing content. This is not a browser error; it is a server-side or network configuration problem.

**Suggested Fix**  
Investigate the backend service or API endpoint that the webpage is trying to connect to. Ensure the service is running and accessible. Check network configurations and firewall rules.

**Why Fix This?**  
Unresolved connection errors directly impact the user experience, rendering certain features unusable.

#### Lack of clear privacy policy detailing Google Tag Manager usage

Priority: 7/10 Confidence: 8/10

GDPR Data Collection Transparency

Third-Party Tracking

**Why is this a bug?**  
The webpage includes Google Tag Manager (G-NJFP60WFG) which is used for tracking and analytics. However, there is no easily findable or prominently displayed privacy policy specifically detailing the data collected by Google Tag Manager, how that data is used, and how users can control their consent. A general privacy policy might exist, but it's insufficient if it doesn't explicitly address the use of third-party tracking tools like GTM. This violates GDPR's requirement for transparency regarding data processing activities.

**Suggested Fix**  
Ensure a clear and easily accessible privacy policy is available that explicitly details the use of Google Tag Manager, including what data is collected, for what purposes, and how users can manage their consent or opt-out of tracking. Provide a direct link to this section of the privacy policy in close proximity to any cookie consent banners or data collection notices.

**Why Fix This?**  
Failure to provide clear information about data collection practices using third-party tools like Google Tag Manager violates GDPR and erodes user trust.

## AI Generated Functional Test Results

Start Page: HOME

### Check Growth Capital Option under Products Menu

This test verifies that the 'Growth Capital' option exists and is accessible under the 'Products' dropdown menu. Ensuring users can easily navigate to this service is critical for discoverability and overall user experience.

### Navigate to the Blog via the Learn Menu

This test case verifies that the 'Blog' link within the 'Learn' menu is functional. Access to the blog is important for user engagement, providing valuable information, and improving the website's SEO.

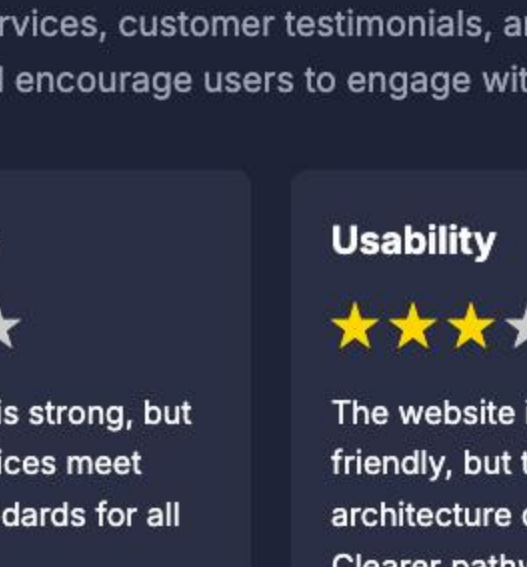

### Form submission with valid data checks success

This test aims to verify the form submission when all required fields are filled with valid data. It validates that the form submission is successful.

## User Persona Feedback Summary

The purpose of the webpage is to attract startups and SMEs and Recur Club's debt financing solutions, highlighting their services, customer testimonials, and media presence to establish credibility and encourage users to engage with the platform.

### Overall Score

The website is well-structured and visually appealing, offering a clear overview of Recur Club's financing solutions. However, some aspects like accessibility and the depth of information could be improved to cater to a broader audience and address potential user skepticism.

### Visual Design

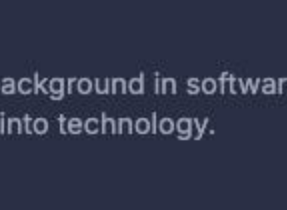

Visually, the site is strong, but ensure color choices meet accessibility standards for all users.

### Usability

The website is generally user-friendly, but the information architecture could be refined. Clearer pathways for different user types (e.g., startups vs. SMEs) would improve usability.

### Content Quality

The content is relevant and well-written, providing a good overview of Recur Club's services. However, expanding on the specific benefits and success stories could further engage potential users.

### Individual User Persona Feedback

**Priya Sharma, 32**

Persona: Priya is the founder of a D2C fashion startup based in Bangalore. She's been running her business for 2 years and is looking for funding to scale her operations and expand her product line. She's tech-savvy but new to debt financing.

**Overall Rating**  
★★★★☆

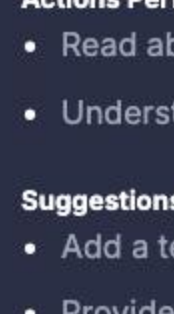

*As a founder, I found the website pretty straightforward. I really appreciate the focus on startups like mine and the easy-to-use funding calculator. However, I'd love to see more detailed case studies of D2C brands that have used Recur Club to scale.*

#### Actions Performed

- Estimate Funding
- Learn More about Recur Swift

#### Suggestions

- Add more D2C-specific content.
- Include a debt vs. equity comparison tool.
- Feature more founder testimonials.

**David Chen, 45**

Persona: David is a seasoned CTO with a background in software engineering. He's skeptical by nature and looks deeply into technology.

**Overall Rating**  
★★★★☆

*As a CTO, I'm most interested in the technology behind Recur Club. I need to know that the platform is secure, scalable, and reliable before I can recommend it. The website gives a high-level overview, but I'd like to see more technical documentation and details about their data security protocols.*

#### Actions Performed

- Read about the tech behind Recur Club
- Understand data security protocols

#### Suggestions

- Add a technical documentation section.
- Provide details about data security protocols.
- Include information about the platform's architecture.
