

# AI Test Results from testers.ai

The Saint Laurent app's HOME page demonstrates significant quality issues. The presence of 'Multiple Failed Resource Loads' and 'Unused Preloaded Resources' indicates a need for performance optimization. Furthermore, numerous WCAG violations, such as 'Ambiguous link text' and 'Missing Main Navigation Menu in Mobile View', point to accessibility shortcomings. Addressing these issues is crucial for improving the user experience and ensuring inclusivity.

### Best Aspects

While the bug reports are plentiful, implying that the app is being used by real people and likely generating revenue, that is a positive aspect. Its possible its generating revenue, and that is a positive.

### Areas for Improvement

The high number of accessibility and performance bugs on the HOME page creates a poor initial experience for users.

## Quality Summary

### HOME

1.27 seconds

Massive Link

### Detailed Analysis

Analyzing the Saint Laurent app's HOME page reveals a concerning number of quality defects. The presence of performance-related bugs like 'Multiple Failed Resource Loads' and 'Unused Preloaded Resources' raises red flags about the app's efficiency. WCAG violations are rampant, with issues like 'Ambiguous link text', 'Insufficient color contrast', and a 'Missing Main Navigation Menu' hindering accessibility. These problems collectively contribute to a subpar user experience and reflect poorly on the brand's commitment to quality. The 'Cookie Consent Popup Obstructs Initial View' also suggests a lack of attention to initial user interaction. The redundant links add to the navigability issues.

### Key Suggestions

- Prioritize fixing WCAG violations to improve accessibility for all users.
- Optimize resource loading to enhance performance and reduce loading times.
- Implement comprehensive error prevention measures, especially when interacting with country selection.
- Conduct thorough accessibility testing to identify and resolve further WCAG compliance issues.
- Refactor redundant links in the header

### Priority Improvements

1. Optimize resource loading on the HOME page to eliminate 'Multiple Failed Resource Loads' and remove 'Unused Preloaded Resources'.
2. Implement a persistent and accessible main navigation menu in the mobile view to address the 'Missing Main Navigation Menu in Mobile View' WCAG violation.
3. Revise link text to be clear and unambiguous, resolving the 'Ambiguous link text' issue and ensure sufficient color contrast for the 'Shipping to' link to meet WCAG standards.
4. Refactor the 'Cookie Consent Popup' to avoid obstructing the initial view, ensuring a seamless user experience.
5. Remove redundant links by refactoring the link structure and content to avoid duplicates.

## Issues Found by AI Testers

#### Missing Main Navigation Menu in Mobile View

Priority: 8/10 Confidence: 9/10

general WCAG

#### Why is this a bug?

The main navigation menu (Highlights, Women, Men, SL Productions, Rive Droite, La Maison, Stores, Services, Login) that is present in the large browser view is completely missing from the mobile view. This significantly impacts usability, as users have no way to easily navigate the site. The hamburger menu present in the mobile view does not show what is available inside. This is a severe accessibility issue.

#### Suggested Fix

Ensure the main navigation items are accessible via the hamburger menu in the mobile view. The hamburger menu should be displayed correctly with the menu visible on click.

#### Why Fix This?

Users cannot effectively navigate the website on mobile devices without a functional navigation menu. This negatively impacts user experience and potentially sales.

#### Multiple Failed Resource Loads

Priority: 7/10 Confidence: 8/10

network performance

#### Why is this a bug?

Multiple 'Failed to load resource: net::ERR\_NAME\_NOT\_RESOLVED' errors indicate that the application is unable to retrieve necessary resources. This could be due to network connectivity issues, incorrect URLs, or server-side problems. This can lead to broken functionality or a degraded user experience.

#### Suggested Fix

Investigate the cause of the failed resource loads. Verify network connectivity, resource URLs, and server availability. Implement error handling and retry mechanisms to mitigate the impact of transient network issues.

#### Why Fix This?

Resolving the failed resource loads is crucial for ensuring the application functions correctly and provides a seamless user experience. Ignoring this issue could lead to broken features, performance problems, and user frustration.

#### Cookie Consent Popup Obstructs Initial View

Priority: 7/10 Confidence: 8/10

general WCAG

#### Why is this a bug?

On the mobile view, a large cookie consent popup appears, covering a significant portion of the screen, including the image. While cookie consent is necessary, the initial display is intrusive and obscures the primary content, potentially hindering the user experience.

#### Suggested Fix

Consider a less intrusive design for the cookie consent popup, such as a banner at the top or bottom of the screen that doesn't obscure the main content as much. Provide a clear and easily accessible option to manage cookie settings.

#### Why Fix This?

The intrusive cookie consent popup degrades the initial user experience on mobile devices. It obscures the main content and forces users to interact with it before they can see the website.

## AI Generated Functional Test Results

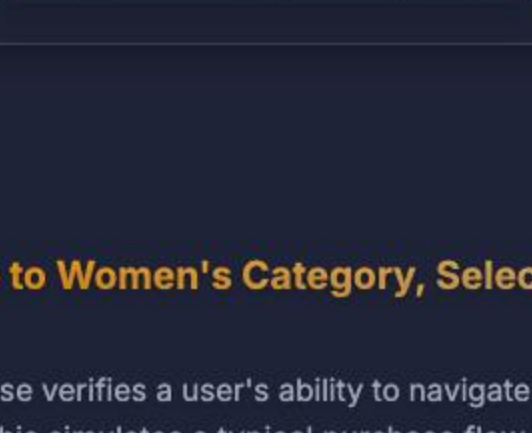

### Start Page: HOME

**Aiden**

Demo\_Tests

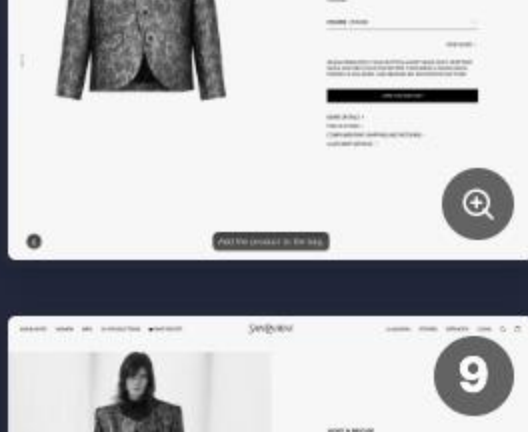

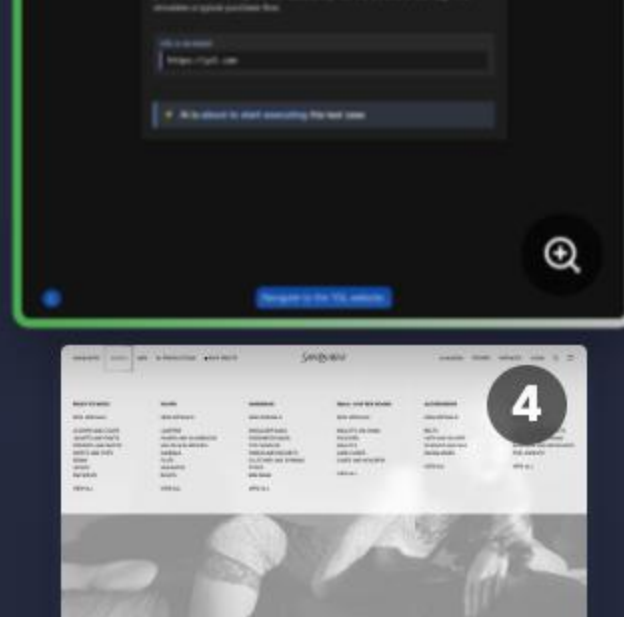

✓ Search for 'dress'

This test verifies that the search functionality returns relevant results when searching for 'dress'. It aims to ensure the search engine correctly identifies and displays items related to dresses.

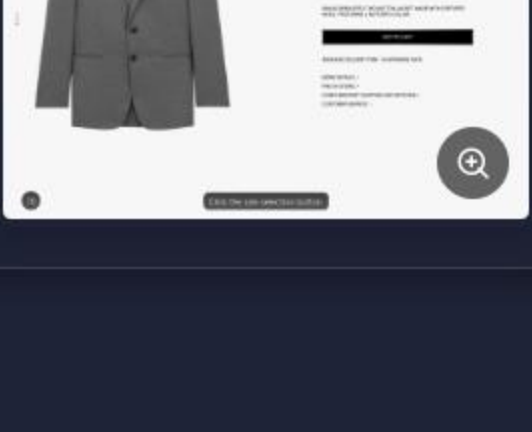

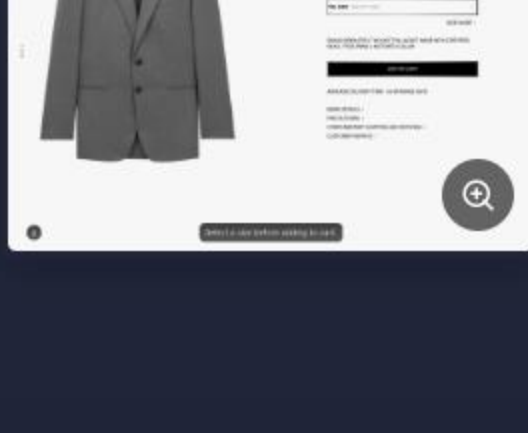

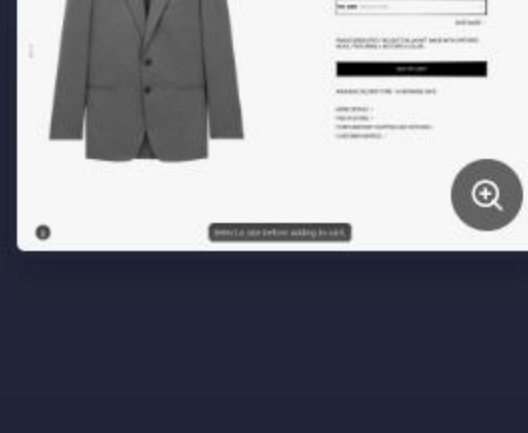

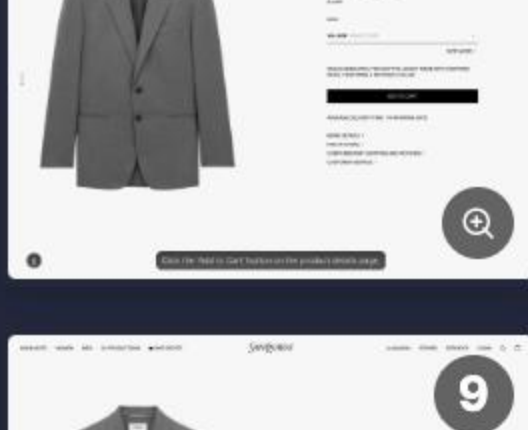

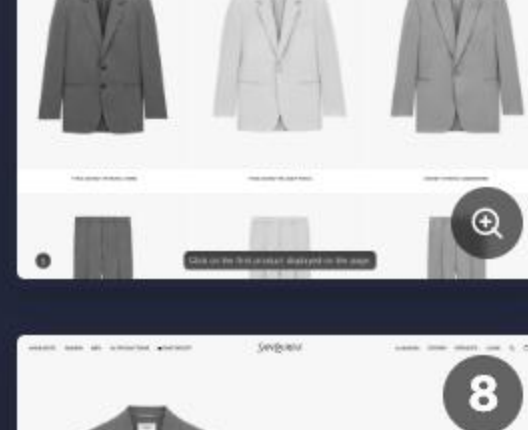

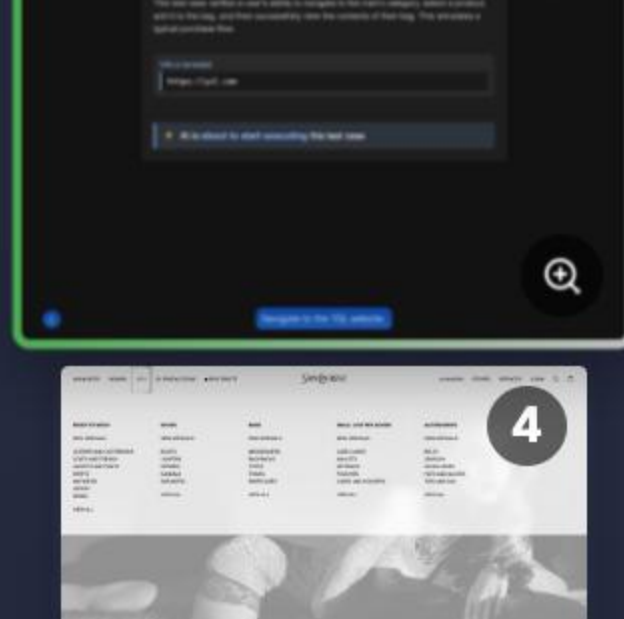

### Navigate to Women's Category, Select First Product, Add to Bag, and View Bag

This test case verifies a user's ability to navigate to the women's category, select a product, add it to the bag, and then successfully view the contents of their bag. This simulates a typical purchase flow.

### Navigate to Men's Category, Select First Product, Add to Bag, and View Bag

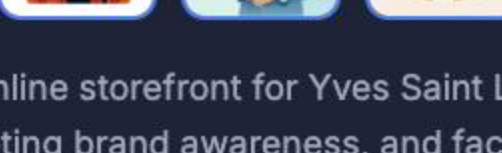

This test case verifies a user's ability to navigate to the men's category, select a product, add it to the bag, and then successfully view the contents of their bag. This simulates a typical purchase flow.

## User Persona Feedback Summary

### HOME

The webpage serves as the online storefront for Yves Saint Laurent (YSL), showcasing their latest collections, promoting brand awareness, and facilitating online purchases.

### Overall Score

★★★★☆

The site is visually appealing but needs to improve usability, especially in navigation and product presentation. Content is relevant, but better filtering options are needed. The site evoke luxury, but accessibility and competitive app are important

### Visual Design

★★★★☆

The visuals are stunning and very on-brand. They immediately convey the luxury and sophistication associated with YSL.

### Usability

★★★★☆

Finding specific items or collections could be easier. Search functionality and filtering options should be improved.

### Content Quality

★★★★☆

The content is informative and relevant, but could benefit from more detailed product descriptions and customer reviews.

### Individual User Persona Feedback

**Amelia Rodriguez, 28**

Persona: Amelia is a marketing manager at a tech startup. She's ambitious, stylish, and always on the lookout for the latest fashion trends. She follows fashion influencers on social media and values brands that align with her values of sustainability and ethical production.

#### Overall Rating

★★★★☆

The site's visuals are stunning, but it's difficult to find details about a bag's sustainability. I need more information on the materials and production process.

#### Actions Performed

- Browse the latest handbag collection
- Check out the new arrivals

#### Suggestions

- Add detailed information about the bag's materials and production process.
- Implement a 'sustainability' filter.
- Create a section dedicated to the brand's ethical practices.

**David Chen, 35**

Persona: David is a software engineer who enjoys staying up-to-date with the latest tech and fashion trends. He appreciates brands that offer both style and quality. He is interested in luxury goods but prefers understated elegance over flashy designs.

#### Overall Rating

★★★★☆

The site is visually appealing, but the product descriptions could be more detailed. I'm looking for specific information about the materials and craftsmanship.

#### Actions Performed

- Browse the men's shoe collection
- Look for a new wallet or cardholder

#### Suggestions

- Add detailed information about the materials and craftsmanship of the products.
- Implement 360-degree product views.
- Add zoom-in functionality to the product images.

**Eleanor Vance, 65**

Persona: Eleanor is a retired art history professor with a keen interest in fashion and design. She appreciates classic styles and high-quality craftsmanship. She values brands with a rich history and a strong commitment to artistry.

#### Overall Rating

★★★★☆

While the site is visually appealing, I find it difficult to access information about the brand's history and artistic heritage. The focus seems to be more on current collections than the brand's legacy.

#### Actions Performed

- Explore the 'La Maison' section
- Learn about the brand's history

#### Suggestions

- Create a dedicated section about the brand's history.
- Showcase the brand's artistic heritage.
- Consider implementing a virtual museum or timeline.
