

AI Test Results from testers.ai

The Sennu app's HOME page reveals several quality concerns. Accessibility is compromised by missing alt text and ARIA labels on social media icons and the toggle theme button. The app also raises GDPR issues due to third-party tracking (Google Analytics, PostHog) without explicit consent and a lack of data collection transparency. Finally, a missing login button in the mobile view degrades usability.

Best Aspects

The incorporation of third-party analytics tools like Google Analytics and PostHog indicates an effort to understand user behavior and improve the app.

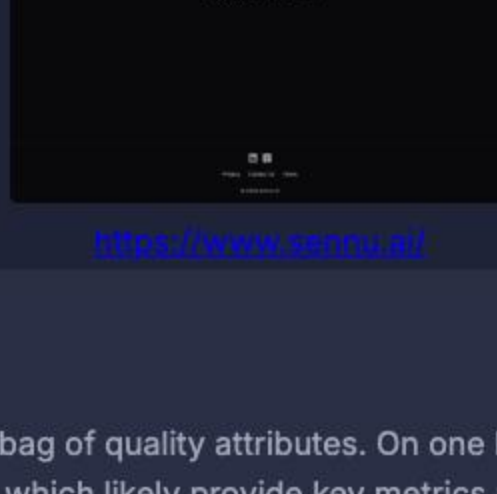

Areas for Improvement

Accessibility, privacy, and usability issues are the major pain points on the HOME page. The GDPR violations are particularly concerning.

Quality Summary

0.99 seconds

[View Overall Report](#)

Detailed Analysis

The Sennu app's HOME page demonstrates a mixed bag of quality attributes. On one hand, the app appears to have incorporated third party support such as Google analytics and postHog which likely provide key metrics related to the usage of the app. However, the HOME page has accessibility issues, specifically several missing alt tags for icons and missing ARIA labels. Furthermore the page violates GDPR laws by tracking users without explicit consent and lacks transparency about its data collection practices. Usability suffers from a missing login button on the mobile view, further compounding the issues.

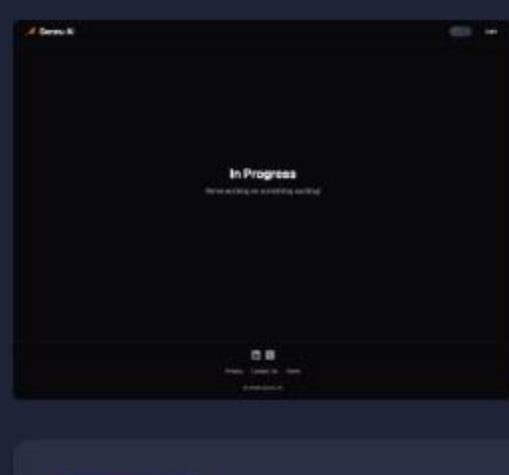

Key Suggestions

- Conduct a thorough accessibility audit of the entire app and fix all identified issues.
- Implement a robust privacy policy and obtain explicit user consent for all data collection and tracking activities.
- Prioritize usability testing on different devices and screen sizes to identify and address any layout or functionality problems.
- Provide clear and easy-to-understand information about data collection practices.

Priority Improvements

- Implement explicit consent mechanisms for third-party tracking (Google Analytics, PostHog) in accordance with GDPR.
- Provide a clear and concise data collection transparency statement outlining what data is collected, how it's used, and user rights.
- Add alt text to all images, including social media icons, describing their function.
- Add ARIA labels to all interactive elements, including the toggle theme button, to improve screen reader compatibility.
- Ensure the login button is visible and accessible on the mobile view of the HOME page.
- Address the insufficient color contrast to ensure readability for users with visual impairments, following WCAG guidelines.

Third-Party Tracking without Explicit Consent (PostHog)

Priority: 7/10 Confidence: 8/10

GDPR Third-Party Tracking

Why is this a bug?

The webpage includes PostHog tracking scripts (various us.i.posthog.com and us-assets.i.posthog.com calls). Similar to Google Analytics, GDPR requires explicit consent before collecting and processing personal data through PostHog. The presence of these requests suggests tracking occurs immediately, without user consent.

Suggested Fix

Implement a cookie consent banner or similar mechanism to obtain explicit user consent before loading PostHog scripts. Ensure users have the option to decline tracking.

Why Fix This?

Same reasoning as Google Analytics: Failure to obtain proper consent for data collection violates GDPR and can lead to legal repercussions and reputational damage.

Missing Aria-Label on Toggle Theme Button

Priority: 7/10 Confidence: 8/10

WCAG ARIA

Why is this a bug?

The button with class 'relative h-[28px] w-[64px] rounded-full transition-colors duration-300 bg-gray-700' that appears to be a theme toggle switch does not have an aria-label or accessible name. This makes it difficult for screen reader users to understand its purpose. Aria-labels are necessary for accessibility and this is likely missing.

Suggested Fix

Add an 'aria-label' attribute to the button, such as 'aria-label="Toggle Theme"' or 'aria-label="Switch to Dark Mode"' (depending on the current state).

Why Fix This?

Without an accessible name, users of assistive technologies will not be able to understand the function of the theme toggle, impacting usability and accessibility.

Missing Login Button in Mobile View

Priority: 7/10 Confidence: 9/10

Missing or Cut-Off Content Navigation Bar Placement

Why is this a bug?

The 'Login' button, present in the top right corner of the desktop view, is absent in the mobile view. This makes it harder for users to login from the mobile layout. The hamburger menu might be intended to contain login, but it's not visible in the provided image.

Suggested Fix

Ensure the 'Login' functionality is accessible in the mobile view, either through the hamburger menu or by adding a login button elsewhere on the screen.

Why Fix This?

Users should be able to log in from any device, and the mobile view should not restrict core functionality.

Third-Party Tracking without Explicit Consent (Google Analytics)

Priority: 7/10 Confidence: 8/10

GDPR Third-Party Tracking

Why is this a bug?

The webpage includes Google Analytics (<https://www.google-analytics.com/g/collect?v=2&tid=G-16KDPY1VVG...>) which collects user data for tracking purposes. GDPR requires explicit consent before collecting and processing personal data, including analytics data. There's no indication of explicit consent being requested or obtained before this tracking begins.

Suggested Fix

Implement a cookie consent banner or similar mechanism to obtain explicit user consent before loading Google Analytics or other tracking scripts. Ensure users have the option to decline tracking.

Why Fix This?

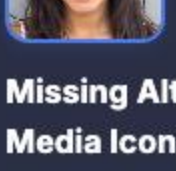

Failure to obtain proper consent for data collection violates GDPR and can lead to legal repercussions and reputational damage.

Missing Alt Text and ARIA labels on Social Media Icons

Priority: 7/10 Confidence: 9/10

WCAG Accessibility

Why is this a bug?

The LinkedIn and Y Combinator links in the footer are represented by icons without associated alt text or ARIA labels. This makes them inaccessible to screen reader users, who cannot understand the purpose of the links. This violates WCAG 2.1 success criterion 2.4.4 Link Purpose (In Context).

Suggested Fix

Add meaningful alt text to the image links and use aria-label attributes to ensure that screen reader users understand the purpose of each link (e.g., ``).

Why Fix This?

Fixing this will improve accessibility for users with visual impairments and ensure compliance with WCAG guidelines.

AI Generated Functional Test Results

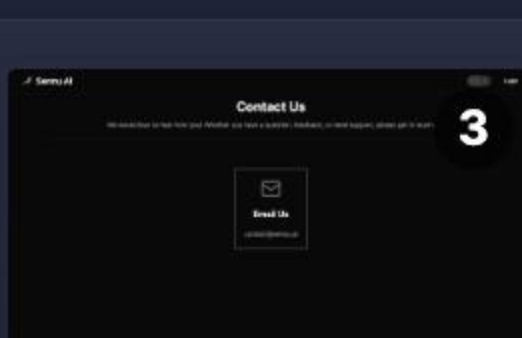

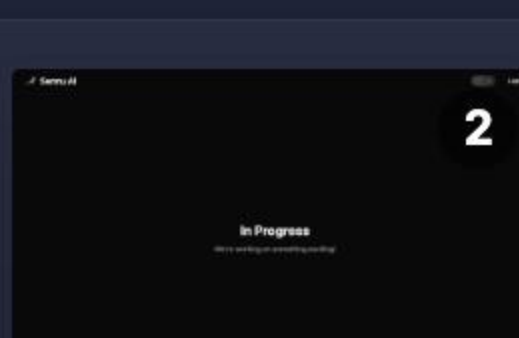

Start Page: HOME

Aiden
Demo_Tests

✓ Navigate to Contact Us Page

This test verifies that the link to the contact us page is functional and navigates the user to the correct page.

✓ Login with valid credentials and existing account

This test is to verify that an existing user can successfully log in to the application with valid credentials and is redirected as expected to the main application after login. Successful login is a core function.

✓ Toggle Theme Switch from Light to Dark

Tests the functionality of the theme switch to ensure it correctly toggles between light and dark modes. This is important for user experience and accessibility.

User Persona Feedback Summary

HOME

The webpage is a placeholder indicating that Sennu AI is currently under development and working on something new.

Overall Score

★★★★☆

The webpage is currently a placeholder page, indicating that the service is under development. Key feedback revolves around the need for more information about what Sennu AI aims to offer and when it might be available.

Visual Design

★★★★☆

The visuals are clean and simple, but there is nothing to look at.

Usability

★★★★☆

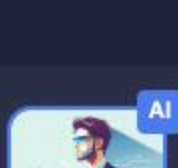

The page is easy to navigate with clear links for privacy, contact, and terms. However, the primary call to action (Login) is currently disabled, which could frustrate some users.

Content Quality

★★★★☆

The content is extremely limited, consisting of a message indicating that the site is under development. It lacks detail and provides little value to the user.

Individual User Persona Feedback

Alan Smith, 35

Persona: Alan is a tech enthusiast and entrepreneur who is always on the lookout for new AI solutions to integrate into his business. He has a strong background in software development and a keen interest in innovative technologies.

Overall Rating

★★★★☆

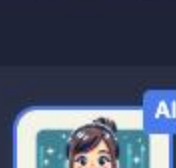

As a tech enthusiast, I'm immediately curious but pretty disappointed by this page. I need to see the value to justify the time spent.

Actions Performed

- Check for a login functionality
- Search for details about the AI solutions offered

Suggestions

- Add a brief description of the AI solutions offered
- Include an estimated launch date
- Provide a signup form for updates

Priya Sharma, 28

Persona: Priya is a marketing manager for a small e-commerce business. She is always looking for new tools to help her team become more productive and efficient, especially in terms of automation and data analysis.

Overall Rating

★★★★☆

I'm hoping this AI can revolutionize marketing, but this page isn't giving me much to work with. I want to know how it can help me!

Actions Performed

- Look for use cases relevant to marketing
- Check for a contact form or customer support options

Suggestions

- Showcase marketing use cases
- Provide examples of AI-powered marketing campaigns
- Include a contact form or chat support
